

Website Design Skills guide

Guide written by Nas
Selling with Nas

If you want to build a website, you can do it with Claude Code, Codex or Cursor, but chances are, it will look like AI slop. But what if I told you, you can build beautiful websites by simply installing a few skills and letting your Agent become a Pro Website Designer. In this guide, I'll show you how.

What will you need?

To Use Claude Code to build a website, you will need 2 things:

1) A Claude Pro Subscription.

Unfortunately, Claude Code is only available under a paid subscriptions

2) Visual Studio Code

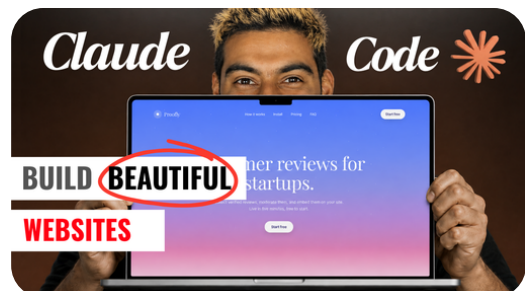

You can download it [here](#). It's free, and don't worry, you don't have to write a single line of code. Simply follow this guide.

Are you a more visual person?

If you want to see a video guide on Youtube of how to get started with Claude Code, watch this video::

<https://youtu.be/yyZ7cFgUhUQ>

If you want to build your first App with me, you can join my Live session:

[Book your slot for a live session](#)

Step 1) Open Claude in your Visual Studio Code

Visual Studio Code (also known as VS Code) is a free app to write and manage code. Think of it as Microsoft Word, but for code. Download it for free at code.visualstudio.com. Inside of it, open the Claude Code extension, and sign in to your Claude account. Here you will be able to start prompting Claude to design your website by simply prompting it. If you need help doing it, simply follow the step by step in the above video.

Step 2) Download the Taste Skill

You can download the skill [here](#), by clicking on the “Download Raw File” in the top right corner.

The Taste Skill is an Anti-slop frontend skill for landing pages, portfolios, and redesigns. The agent reads the brief, infers the right design direction, and ships interfaces that do not look templated.

Step 3) Download the Frontend-Design Skill

You can download the skill [here](#), by clicking on the “Download Raw File” in the top right corner.

The Frontend Design Skill gives guidance for distinctive, intentional visual design when building new UI or reshaping an existing one. Helps with aesthetic direction, typography, and making choices that don't read as templated defaults.

Step 4) Borrow a style you like and feed it to your Claude Coding Agent

You can go to this website: <https://www.siteinspire.com/>

From here, browse through different types of websites, choose one, and share it with your Claude Code. It will take the style, font, colors spacing and overall theme (based on your request) and apply it to your design.

Step 5) Use 21st.dev for moving elements and components

You can go to this website: <https://21st.dev/>

Her you can browse through and find components, animations and elements to add to your site.
